

Bike Generator Wiring Diagrams

as seen on YouTube

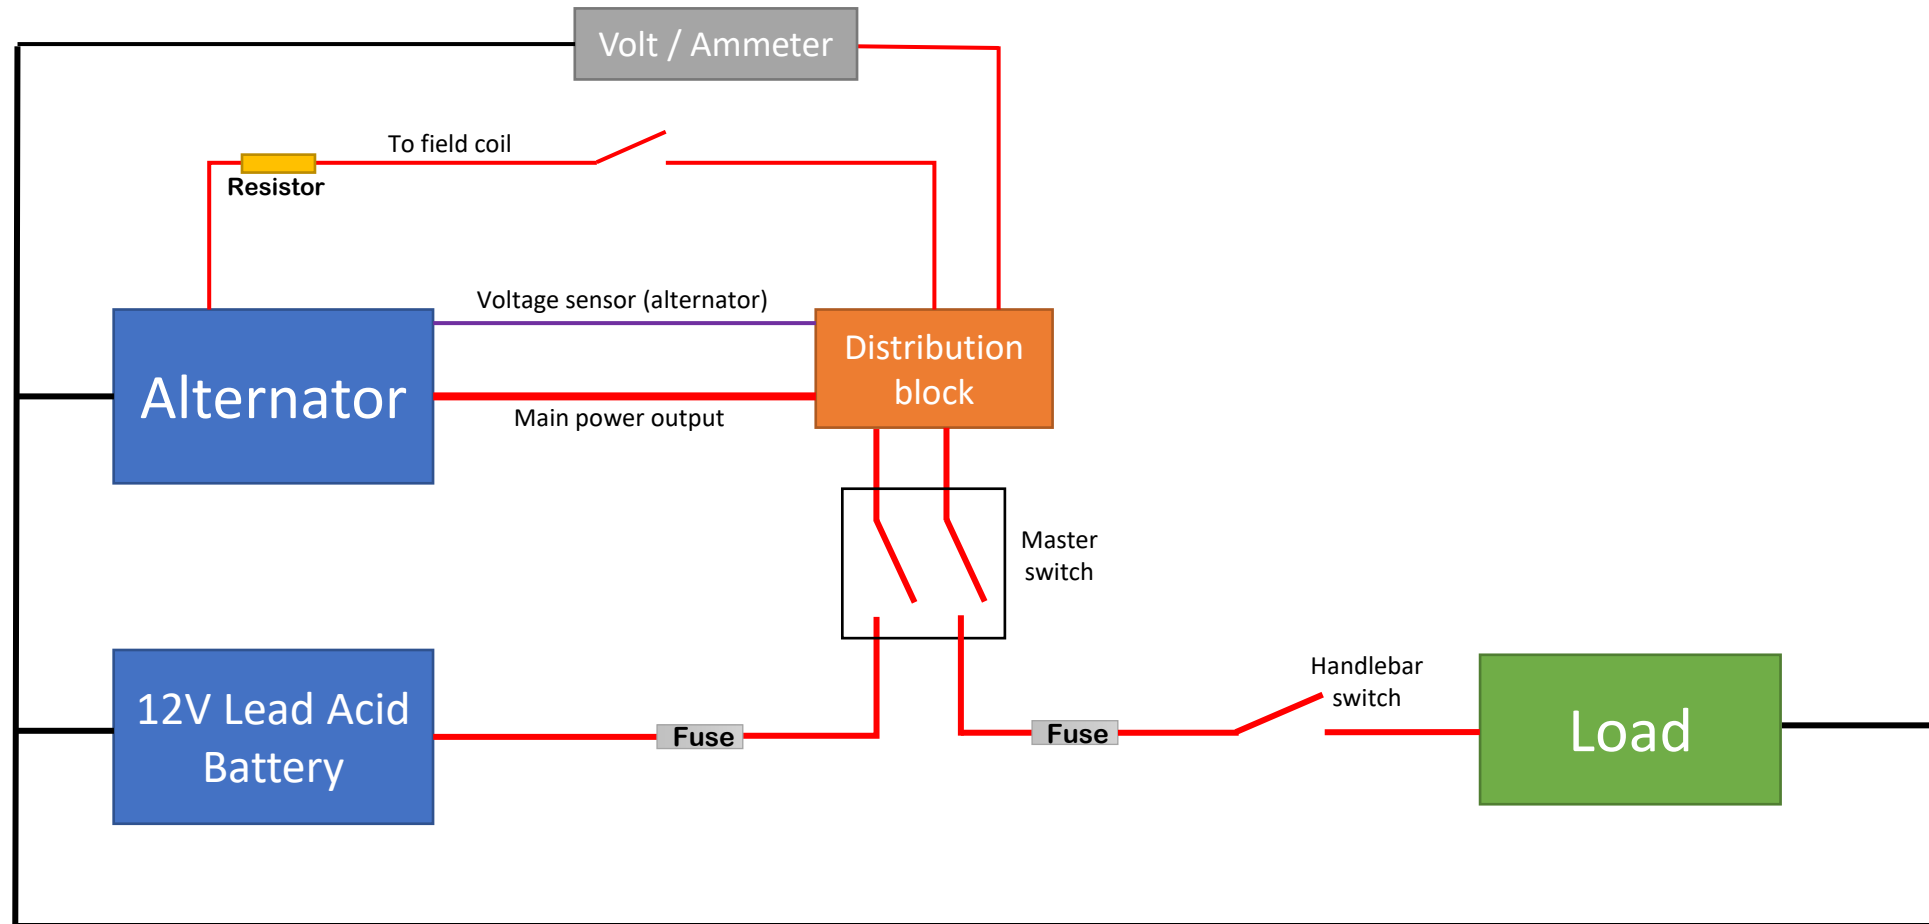

PLEASE NOTE:

These diagrams are for illustrative purposes only. No guarantee is made as to the safety of these circuits, however they are constructed. Systemic Creative and its Directors accept no liability for injury or death, howsoever caused in connection with building anything based on these documents.

If you undertake to build a generator based on these designs, you do so entirely at your own risk. It is your responsibility to ensure that the componentry you use is safe and compatible with other components in the circuit. It is your responsibility to ensure that your final project is safe for the environment in which you wish to use it and for the people for whom it is intended. The generator illustrated in the videos accompanying these diagrams is **NOT SAFE** for children, pets or anyone who is not qualified to understand the componentry used.

In particular, large capacitors, alternators and some batteries can cause **FATAL** electric shocks if not properly connected or handled. It is your responsibility to understand all risks involved and if you do not, you must seek advice from a qualified person. Systemic Creative directors are not qualified electricians and do not purport to be, thus these diagrams must not be considered to be advice or instructions. They are simply an illustration of what we've done in our office for our own use.
